EDUCATION	Master of Science in Computer Science and Engineering <i>National Autonomous University of Mexico (UNAM) - GPA: 9.64/10.00</i> <i>Focus area: Signals, Images, and Virtual Environments</i>	Mexico City, Mx <i>May 2024</i>
	Weather and Climate Risk and Data Analytics Graduate Certificate <i>University of Illinois Urbana-Champaign - GPA: 3.89/4.00</i>	Remote <i>Dec. 2025</i>
	Bachelor of Science in Computer Science <i>University of Michigan Ann Arbor - GPA: 3.4/4.0</i>	Ann Arbor, MI <i>May 2021</i>
SKILLS	Programming: Python, C++, C, Bash, Java, SQL/PLSQL Scientific/ML: PyTorch, CUDA, Matlab OpenGL, Dask Tools: Git, Google Cloud, Oracle Cloud (OCI) Languages: Native English Speaker, Spanish Certified Fluent	
EXPERIENCE	Oracle - IC3 - Senior Member of the Technical Staff - Automation Tools - Developed and maintained various automation tools to detect changes that cause code regressions, file bugs, and reduce developer workload. - Proposed and developed a validation tool to confirm another tool's result, automating a painful part of the testing process and saving to date 600+ hours of manual labor from 2000+ validation job submissions. - Designed a framework to detect anomalies in data processed by automation tools, which is now running for three separate tools and has reported over 1100 anomalies that warranted manual intervention which would have gone missed. - Collaborated in the design and development of an internal AI platform to make LLM usage accessible, and facilitate the creation of AI agents and workflows, which hosts 22 apps, with 16 more in development from a diverse set of teams.	Mexico City, Mx <i>June 2023 - Present</i>
	Oracle - Intern - JDBC Test Programmer - Designed and implemented a test framework for JDBC library with Oracle Cloud databases, effectively doubling existing testing capacity. - Developed testing tool that manipulates connections between a program and a database to make erroneous behavior reproducible to test driver's behavior in disaster scenarios.	Mexico City, Mx <i>Aug. 2022 - June 2023</i>
	Language Engineering Lab (UNAM) - Research Assistant - Collaborated on the development of natural language hate-speech datasets, scraping data, performing statistical analysis, and performing benchmarking tasks with LLMs. - Designed and developed an online annotation tool for research assistants to annotate data, yielding a human annotated dataset that safely handled sensitive personal information, all while rigorously curating the annotation process for the validity and integrity of the surveyed data.	Mexico City, Mx <i>Jan. 2022 - Dec. 2024</i> <i>Part Time</i>
	University of Michigan - Research Assistant - C.S. Department, Dr. Kevin Leach - Performed rigorous static analysis on binary code using tools such as Radare2 and Objdump to study C/C++ code from a low level. - Utilized cloud computing resources to fine-tune neural networks such as BiLSTMs and YOLOV4 for various scientific projects. - Managed a survey to measure code comprehension of assembly code supplemented with code comments from the original source code.	Ann Arbor, MI <i>Aug. 2019 - Aug. 2021</i> <i>Part Time</i>
	PUBLICATIONS Five peer reviewed computational linguistics papers on hate speech detection and understanding on social media. Available on my website .
